

2021 Native Plant Sale

First year plants	\$4.00
Grasses & Lupine	\$4.50 (yellow labels)
Two year plants	\$5.00 (popcicle sticks)
Established plants	\$6.00-\$10.00
Members-10% discount (must sign in on website)	

How to Harden Off Plants

Plants grown in a greenhouse need to be given time to adjust to the variable temperatures, sunlight and wind outdoors. This is called “hardening off” and is easy to do:

- If temperatures are above freezing, set plants outside during the day in a location that’s protected from the wind and out of direct sun.
- If it’s cool, begin by leaving them outside for an hour or two. If it is warm, leave them outside up to half a day. Bring plants indoors the first night.
- Each day, gradually expose the plant to more sun, breeze and time outdoors, including overnight. Soil may dry out quickly, so check plants often and water as needed.
- Usually after about four days, plants are “hardened off” and ready to be planted in the ground. Transplant during the cool time of day and water well.

Guide * new ? may not be available because of growing conditions
 Sun: S-full sun; PS-part sun; PSh-part shade; Sh-shade
 Soil: D-dry; M-medium; W-wet
 Comments H-hummingbirds; BF-butterflies; (h) host (caterpillar food) plant;
 (n) nectar plant

Some plants may not be available because of growing conditions.
