Little Bluestem	Andropogon scoparius	Amber; July-Sept.	18-36"	D-M	S-Psh	Fabulous ornamental grass, neat clumps
Prairie Dropseed	Sporobolus heterolepis	Green; Aug.-Oct.	18-36"	D-M	S-PS	Good for landscaping; seeds food for birds

How to Harden Off Plants

Plants grown in a greenhouse need to be given time to adjust to the variable temperatures, sunlight and wind outdoors. This is called "hardening off" and is easy to do:

- If temperatures are above freezing, set plants outside during the day in a location that's protected from the wind and out of direct sun.
- If it's cool, begin by leaving them outside for an hour or two. If it is warm, leave them outside up to half a day. Bring plants indoors the first night.
- Each day, gradually expose the plant to more sun, breeze and time outdoors, including overnight. Soil may dry out quickly, so check plants often and water as needed.
- Usually after about four days, plants are "hardened off" and ready to be planted in the ground. Transplant during the cool time of day and water well.

Guide

* New

? May not be available because of growing conditions

Sun: S-full sun; PS-part sun; PSh-part shade; Sh-shade

Soil: D-dry; M-medium; W-wet

Comments: H-hummingbirds; BF-butterflies; (h)-host (caterpillar food) plant; (n)-nectar plant

Some plants may not be available because of growing conditions.
