Tussock Sedge-Common*	<i>Carex stricta</i>	June-July	3'	W-M	S-PSH	Wetland sedge

How to Harden Off Plants

Plants grown in a greenhouse need to be given time to adjust to the variable temperatures, sunlight and wind outdoors. This is called "hardening off" and is easy to do:

- If temperatures are above freezing, set plants outside during the day in a location that's protected from the wind and out of direct sun.
- If it's cool, begin by leaving them outside for an hour or two. If it is warm, leave them outside up to half a day. Bring plants indoors the first night.
- Each day, gradually expose the plant to more sun, breeze and time outdoors, including overnight. Soil may dry out quickly, so check plants often and water as needed.
- Usually after about four days, plants are "hardened off" and ready to be planted in the ground. Transplant during the cool time of day and water well.

Guide

*New

Sun: S-full sun (6+ hours of sun); PSH-Part Shade (3-6 hours of direct sun);

SH-Shade (less than 3 hours of sun)

Soil: D-dry; M-medium; W-wet

Comments: P-pollinator favorite; B-bird favorite

Host plants are caterpillar food!

Some plants may not be available because of growing conditions.
